Claims 1-12 are pending in this application which should be reviewed for errors.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-5, 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Ogawa et al., The Chemical Society of Japan Koen Yokoshu 84(2):1270, K3-45 (2004). Ogawa et al. disclose the allylation of an N-acylhydrazone with allyltrichlorosilane using a chiral phosphine oxide as a step in producing alloseleucine.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-6 and 9-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ogawa et al., The Chemical Society of Japan Koen Yokoshu 84(2):1270, K3-45 (2004). Ogawa et al. disclose the allylation of an N-acylhydrazone with allyltrichlorosilane using a chiral phosphine oxide as a step in producing alloseleucine. The instant invention differs from the teaching of Ogawa et al. in that other acylhydrazones, allylating reagents and phosphine dioxides substituted by tolyl not phenyl groups may be used. It would have been prima facie obvious at the time the invention was made to one of ordinary skill in the art to start with the teaching of Ogawa et al., to make further processes using other acylhydrazones, substituted allyltrichlorosilanes and phosphine dioxides substituted by tolyl and to expect to produce allylated products. The use of different, but analogous reactants in an old process does not render the process itself unobvious. In re Durden et al., 226 U.S.P.Q. 359.

Claims 7 and 8 are allowable, but objected to as dependent on a rejected claim.
